roo.me

About the application

Finding the perfect roommate can be a tough and exhausting task. roo.me offers a fast easy mechanism using 'YES or NO' interface that lets you find your ideal roommate based on your specific preferences and hobbies.
No more crappy roommates.

Future Features – Sign Up & Log in

Sign up
Provide all essential data (email, password..).
Also, in the sign up the user will have to state whether he is seeker or apartment owner.
Log in
Log in to a registered user with email and password.
[Forget your password – optional]

Future Features – Update user & profiles

The user will be able to manage all base user fields such as: Email, Password, Etc...
This feature will have its own designated page.

Also, Apartment owners will have a page where they can update their apartment qualities.
Likely so, Seekers will have a page where they will be able to update their preferences.

Future Features – Apartment homepage

The apartment owner will have a home page that consists of the following features –

Hello message.

View recent pending connection requests.

View your apartment card (the way seekers see it).

Future Features – Seeker homepage

The Seeker will have a home page that consists of the following features –

Hello message.

'Top 10 picks for you' swipe section.

In the swipe section, the seeker will have quick access to suggested apartments according to his preferences and hobbies.

Future Features – Apartment oriented search

The user will be able to access a search page, where he can provide fields and view matching apartment results accordingly.
The fields will be filled with the seeker preferences / apartment qualities by default, but can be modified with temporary data.

Future Features – Search mechanism

The search results will be filtered by the preferences the user provided before the search.
And prioritized according to a score-based algorithm, driven by the hobbies of each user.
Meaning – The user will be able to view apartments that answer his preferences, but he will see apartments that match him the most first.

Future Features – Create a connection

Once a seeker stumbles upon an apartment card he likes (on the search or home page)
he will be able to press 'yes' to engage the owner. This will send a connection request to the apartment owner, and after a brief view of the seeker's profile, the owner will be able to accept the request and continue.

Future Features – Manage connections

The user will be able to list all his connections.
In the list he will be able to accept / reject pending requests, block users and use list filters.

[Will be able to create a contact session – optional]

Future Features – Connections sidebar

As a logged in user, a floating sidebar will accommodate you.
The sidebar will consist of the user's connections, and will notify the user if any new progress has been made regarding his connections.
[Notified on new messages – optional]
